AN 27184 KOSMET FS miscellaneous

AB New York City's Waldorf-Astoria was the site for The **Fragrance** Foundation's Spring/Summer 2003 Trends Forecast. Philip B. Miller, President of his own consulting firm, Philip B. Miller Associates (and former Chairman and CEO of Saks Fifth Avenue) moderated a discussion that included insight from Teresa Donahue, CFA, Equity Research Retailing Analyst, Neuberger Berman; Rene Morgenthaler, Perfumer, Head Global **Fragrance** Product Lead, GivaudanAccess; and Michael Calman,

Senior VP, Marketing and Public Relations at Bergdorf Goodman. Morgenthaler addressed the **fragrance** classics - scents that make people change the way they think about **fragrance**. These capture the imagination and are universally understood. Neuberger Berman's Danahue touched upon the consumer's constant quest for newness and desire for specialty goods, which are driving sales in luxury stores. She cited Coach as an example of a classic that reinvented itself. Coach transcends its signature leather to include fabric handbags, such as its holiday plaid. According to Bergdorf Goodman's Calman, there has been a change in purchasing behavior. Consumers are not resisting price and are willing to pay for quality products and specialty goods. The prestigious store has turned to artisanship in its product assortment that includes handmade paper and **personalized** goods, as well as merchandise with an emphasis on the home.

AN 25538 KOSMET FS scientific, technical

AB The article discusses textile materials with fixed cyclodextrins as a **fragrance** depot. The ability to semi-permanently infuse fabrics with finished **fragrances** and/or **fragrance** materials opens up a new realm of formulation and application possibilities for perfumers. The market has already seen the introduction of scented pillows and the like, but Buschmann et al.'s recent work presents the possibility of (washable) scented sportswear, linens, upholstery and many other household products that may be **customized** at will, and which it may intake unpleasant odors while imparting pleasant ones

AN 25073 KOSMET FS miscellaneous

AB Space age, architectural, sleek are the most frequently used adjectives with modern design and packaging of cosmetics, says the author and reviews a number of packaging in the marketplace in the USA. The sleek architectural designs of Masaki Matsushima, known for his conceptual size-less and unisex men's and women's fashions, have resulted in his award-winning, first **fragrance** called mat. With Premier Jour, Nina Ricci offers 21st century sensuality with timeless romance. When it comes to minimal designs, the name of Calvin Klein is always at the top of the list. His latest **fragrance** launch, Truth, is no exception Calvin Klein, his design team, and Fabien Baron of Baron & Baron (New York) have translated the ideas of simplicity into a bottle that is a marked departure from the apothecary bottles of cK One and cK Be. In March, 2001, the House of Lanvin launched its new women's **fragrance** Oxygene 'in a balance of contemporary elegance sensuality.' Another example of prestige packaging is given with the description of Prada's skin care line whose containers are so minimally designed that they make most medical packaging seem outrageous. And these

days, with status and luxury looking a great deal like **customized** stock packaging, it's no wonder that there are so many interpretations in the marketplace. Such as, Isabella Rossellini's makeup line, Manifesto, whose product designs exude an organic simplicity that is also quite elegant, which is one way to go. Another comes from Avon whose becoming line are showcased at Avon Center "stores-within-a -store" a J.C. Penny department stores nationwide

AB The **fragrance** industry is at the forefront of big changes led by technological innovations such as aromachology and customization. In 1999, total U.S. prestige **fragrance** sales rose 2% to US\$2.9 billion. Of that total, men's **fragrance** sales accounted for US\$961 million, down 1%, and women's **fragrance** comprised US\$1.9 billion, up 6%. The rise of aromachology, scents that alter mood or promote well-being, helped to develop the **fragrance** market. Such market products are Shiseido's "Relaxing scent", "Energizing **fragrance**" and "Zen"; Est'e Lauder 's "Prescriptives Potion"; Calvin Klein's "Truth" scent. As a further trend in the **fragrance** market, some companies are mentioned which offer **customized fragrances**, i.e. the customer can blend his own scent or may choose in a **personalized** process products that reflect their wishes. A further trend is described, the resurgence of the floral, feminine **fragrance** and actual product examples of the market are given as Est'e Lauder's latest scent "Intuition", Issey Miyake's scent "Le Feu d'Issey Light", Givenchy's "Hot Couture" and Guerlain's "Metallica"

AN 21706 KOSMET FS miscellaneous

AB What is **customized** packaging? Where does it start? And where does it finish? Although it is certainly a field which is still misunderstood, it is the field of the **customized** packagers. In the cosmetics industry these people are no longer just subcontractors: they are true partners. The Syndicat de Contionnement a Facon (Association of **Customized** Packagers) brings together more than sixty French companies, approximately half of whom are active in the cosmetics and **perfume** sector. This is excluding the large number of companies who are not members of CAF, some of which were presented in the latest exhibition, dedicated to the 'The Private Label', organised in Amsterdam. They share a cosmetics sub-contracting market, which is estimated to be worth 1.5 billion francs in France, 200 million francs alone represents sachets and sample packaging. These companies package samples or unit doses. Others produce, package and/or store care products, toilet products, make-up lines, etc., some of which they may formulate themselves. Their customers include groups with National and International brands for whom the **customized** packager meets several needs: test launch of a product line ('one shot' avoiding investment and therefore limiting risk in the event of failure),

manufacturing a non-strategic marketing sector is also an important client as they do not have their own sites. These companies are at present in different sectors of activity. They have different technologies. They also have different industrial limitations. Parfums Cosmetiques Actualities describes this little know field

AB A floor mat system for placement directly near an entryway to permit the disinfecting and cleaning of shoe soles and all other surfaces contacting directly with the fibers of the mat. The floor mat system consists of a frame structure either mech. or rubberized in construction. The top portion being of a carpet type fiber construction, with a hollow center portion and rubberized non-skid backing against the floor and sides. The hollow center portion of the system may be enclosed and a microbicidal component introduced to the carpet fiber portion in a capillary action. Alternatively, the microbicidal component may be contained in a sep. enclosed package which is introduced to the carpet fiber portion through spray heads located on the enclosed package in a pressure action activated by wt. on the top carpet layer. The floor mat system may also be integrated into other floor or carpet. The floor mat system may also include a moisture absorbing component, a cushioning component, **customized** graphics, anti-fungal compn., or a **fragrance**. Anti-slip features may be assocd. with the mat to prevent slipping. Addnl., a sensor may be included in the floor mat to assist a user in identifying when the floor mat system may require refill of the microbicidal component.

PRIORITY APPLN. INFO.: US 2000-628123 A 20000728				

AB A shaving prepn. is described that undergoes a change (e.g., a color change with a dye) discernible to the user when the hair to be shaved has had time to absorb water and soften, when the shaving prepn. has been sufficiently hydrated after a period of time in which proper hair hydration would normally be expected to have been achieved, or any combinations. Shaving prepn. of this type advantageously alert the user when at least one desired shaving condition exists. A 2-part reaction is provided in which the shaving prepn. initially changes color when applied to a wet face and then after an appropriate amt. of time, the shaving prepn. changes again to its final color indicating that the beard is prepd. for shaving. The initial reaction resulting from the presence of water implements a pH indicator that can include but is not limited to Thymol Blue. The second reaction is based on an oxidn. reaction and incorporates a **customized** leuco dye which when activated changes color at a predetd. rate. These two dyes are incorporated into the shaving gel by controlling the pH of the gel and by deoxygenating the gel under manufg. conditions. The preferred indicator requires the gel pH to be maintained around 8.5, which will provide the max. flexibility in color change for this indicator. For the leuco dye, the gel is substantially deoxygenated because the dye is oxygen sensitive once placed in a basic environment. During manufg., oxygen can be removed from the gel components by bubbling each soln. with nitrogen and maintaining a nitrogen blanket during processing.

AB Compns., articles and methods are provided for supplying fabric care benefits to clothing or fabrics in an automated washing machine and by manual washing. The fabric care compns. preferably have less than about 5% detergent surfactants, more preferably less than 3%, even more preferably less than 1% and are most preferably free of detergent surfactants. Similarly, the fabric care compns. preferably have less than about 5% fabric softener actives, more preferably less than 3%, even more preferably less than 1% and are most preferably free of detergent surfactants. The laundry articles can take a variety of forms in a variety of phys. states all of which will rapidly dispense a unitized amt. of one or more selected fabric care agents to a wash and/or rinse bath soln. during the laundering process under a variety of conditions. The invention also pertains to laundry kits that contain a variety of such articles and instructions concerning their use. Likewise, methods for prepg. a **customized** laundry soln. to obtain a specific fabric care benefit selected based on the user's personal preferences and/or the fabric care needs of the fabrics being laundered are also provided. Further, the present invention also concerns methods for assisting a consumer in identifying the unitized articles to be used in prepg. a laundry soln. that will impart desired fabric care benefits as well as merchandising displays for dispensing the articles, assembling **customized** laundry kits and instructing the consumer on the selection and use of laundry articles.

AB The invention relates to novel arom. compns. consisting of HLA mols., to which two different potential **perfume** carriers are assigned. The invention aims at developing novel arom. compns. consisting of HLA mols. based on the selection of alleles of genes which are relevant from an olfactory viewpoint and subsequent processing. According to the invention, the arom. compns. are produced by selecting one allele amongst known class I HLA alleles, which differs in at least one characteristic from other alleles of HLA class I mols. and which is present in less than 5 of individuals of the world population; the protein that is coded for by the selected allele undergoes assembly in the presence of .beta.2-microglobulin (.beta.2m); the formed HLA class I mols. are purified with the bonded peptides and fragmented with the protease, and the odor-active substances resulting from fragmentation are added as individual components or as a mixt. to a cosmetic prepn. Thus HLA A*6601 was expressed along with .beta.2-microglobulin in a bacterium culture; the product was in form of inclusion bodies; after gel filtration, digestion with pronase type XIV and Sephadex G-1000 purifn. it was used as component A odor. Allele HLAB*7301 was similarly expressed and purified and used as component B odor. A two compn. **perfume** kit was prepd.; compn. A contained component A 11%, water 1%, blue dye 0.05% and ethanol ad 100. Compn. B contained component B 10%, water 1%, yellow dye 0.06% and ethanol ad 100. The compns. were stored for 10 days at 5-10.degree.C and given to couples, each one obtained one component.

AB The invention provides a system for prepg. a hair shampoo, conditioner, and styling compn., wherein each system is composed of sep. components

that can be combined as desired by the user to provide **customized** hair care formulations. The systems include a water-thin base compn., a thickening compn., and optional enhancing additives, wherein each compn. is sep. packaged. The viscosity of the end-product shampoo, conditioner, or styling compn. can be varied, from a thick, pourable liq. to a thicker, pasty material depending on the amt. of thickener that is added to the base. A shampoo compn. contained deionized water 65.70, Celquat SC-240 0.25, Hampene-100S 0.05, methylparaben 0.20, Alkamide-S280 1.50, Monamid S 1.00, Detaine PB 3.00, Cetiol HE 1.50, Glucamate DOE-120 2.00, Hamposyl L-30 24.0, citric acid 0.50, Kathon CG 0.05 and **fragrance** 0.25% by wt.
